

Which no roller will deny!

A "jolly good" smoke indeed, the cigarette you roll with fragrant, friendly Ogden's Fine Cut. The more particular you are about your cigarette tobacco the more you'll feel like giving a "hip! hip! hurrah!" for Ogden's—and a "higer" when you use the best papers "Chanticleer" or "Vogue". And, by the way, there's a bigger package of Ogden's for 15c now.

P.S.—Your Pipe Knows Ogden's Cut Plug.

OGDEN'S
FINE CUT

National Radio Program

A canvass of radio fans throughout the prairie provinces, if such a survey could be made reasonably representative of very diverse views, would undoubtedly reveal a mixed reception for the Canadian Broadcasting Corporation's plans, recently announced by L. W. Brockington, K.C., chairman of the board of governors of that institution, following its only meeting held outside of Ottawa to date.

Some of the plans announced at the close of the Regina sitting have undoubtedly caused disappointment. On the other hand some of them will meet with majority approval. There may be some who will see no good in anything that the Corporation proposes to do and it is quite possible there are a few who are ready to accept the announced program in toto and with every evidence of complete approval.

For the average "listener-in", who is not too discriminating, and that probably covers the majority, however, the objectives of the three-year program, which includes construction of four high-powered broadcasting stations in the period, two in the east, one on the prairies and one in the maritimes, as well as other improvements, have something of merit, though some phases of the plans are disappointing.

It is disappointing, for instance, to find that nothing is likely to be done towards the construction of a 50,000 watt station in the west for at least a couple of years, while Ontario and Quebec, whose people have access to a number of good, high-powered stations on both sides of the international boundary carrying excellent programs, are to be served immediately with two such stations, as quickly as they can be built.

In the western provinces there are a good many "blind spots" which are now either not reached at all by good programs or only spasmodically. Until the proposed new national high-powered western station is constructed they will have to continue to go without a service or have to be satisfied with a doubtful one.

It is a matter for congratulation that during the past year or two there has been a gradual but quite perceptible improvement in the quality of the programs broadcast on the national chain, whether due to the change in administration or for some other reason, but this improvement only serves to accentuate disappointment in the delay in bringing these programs to the door of everyone on the prairies able to own a receiving set.

In view of the recent improvement in the programs there will also be approval for the announcement of the intention to extend the C.B.C. service from its present six hours schedule to 12 and perhaps 16 hours a day, always provided, of course, that wave band agreements which may be made, will not confine the owner of the receiving set to one source for his entertainment and instruction.

As already stated, the quality of the programs broadcast over the national chain has materially improved, but that does not mean there is not room for further improvement. There is yet a substantial gap to be bridged before these programs can be classified with some of the best to be heard on the U.S. chains. For this reason the announcement of the intention to arrange for more exchanges of programs will be generally welcomed in the Canadian west. For the same reason, the average western radio fan still desires not only to retain what selective right conferring radio bands permit him, but is anxious that interference should be further reduced. This question of interference is still one of the greatest grievances of the listeners-in on the prairies.

Possibly when the C.B.C. can offer programs of its own to match the best that is produced on the other side of the international boundary, prairie owners of receiving sets will not be so much concerned with interference of reception from other stations. If expense which cannot be met out of revenue stands in the way, the Canadian Corporation might well consider the advisability of embarking in the commercial field, at least in an experimental way and with safeguards against abuse by advertising media.

One of the proposals of the C.B.C. which should be received with approval on all hands is the announced intention to set up a school for radio announcers.

While there has been a marked improvement in announcing on both sides of the international boundary in the past two or three years, resulting in the disappearance of some of the worst crassness which other voices were subjected in the use—or should it be abuse?—of the king's English, pronunciation and diction, to say nothing of modulation of voice, there is in this field also, scope for betterment. A school for announcers, properly conducted should do much to iron out some remaining objectionable features indulged in by some announcers on occasion.

By and large the Canadian Broadcasting Corporation, shows that it has some ideas, and that is something for which appreciation should be expressed.

Might Be Distress Signal

There is a correct and an incorrect way to fly the Union Jack. On the red diagonals which constitute the cross of St. Patrick there is a white base (the cross of St. Andrew). This white base is wider on one side than on the other. When the Union Jack is flown correctly, the broad white base is on top nearest the flag pole. If the narrow white base is on top at this place, the flag becomes a signal of distress.

An educated asyrup pot has been invented by Clyde Mutton, Oshkosh, Mo. When the lid descends after you pour the asyrup, Mutton's pitcher sips itself with a device attached to the lid.

February, on the average, is London's least rainy month, while October is the rainiest.

"Wrestling is an excellent aid to health," says a doctor. "A grapple a day keeps the doctor away."

Champion Letter Writer

Algernon Bennett Ashton, who styled himself the "champion letter writer" to the British Press, died recently, aged 77. He had written more than 2,000 letters but had published since 1900. He liked looking at ancient buildings, criticizing modern buildings, listening to debates in the House of Commons and billiards, draughts, chess and cards.

Has Its Drawbacks

If the house trailer has done nothing more it has put the country on a cash basis, at least for groceries. No merchant is going to depend on a backside to earn him that a delinquent creditor is stealing away. You may have your belongings on credit, but you will pay cash for the bacon, if you live in a trailer.

"Once a road is laid down properly," says a building expert, "it shouldn't be taken up in a hurry." It isn't, the authorities spend months and months on the job.

Losses Were Lighter

Freight Car Robbers Not As Successful Last Year

Raids by swooping bandits on U.S. passenger trains did not long survive their most eminent practitioner, Jesse James. Much different in technique are the raids still made on freight trains.

Freight car robbers work often on moving trains, choose sparsely settled country where a highway runs beside the tracks. Swinging off from box car roofs on rope ladders, they break the seals on the doors, climb in and toss out everything they can lay their hands on. Confederates in trucks pick up the loot.

The Association of American Railroads reported that claims resulting from freight car thefts in the U.S. and Canada totalled \$688,792 in 1936, lowest for any year on record. Biggest losses were in coal and coke, stolen not only by organized gangs but by individuals who needed fuel.

Determining Twins

New Method Is Found By Taking Finger Prints

The Royal Society of Canada heard a method described of determining if twins are identical or fraternal by comparing their finger prints.

Dr. John W. MacArthur of the department of biology, University of Toronto, described a method he had devised to determine the degree of resemblance between prints of the right and left hand of a single individual or the hands of two individuals.

He said left and right hands in a single individual average about 27 per cent. unlike in twins and single-born. Matching left hand with left and right with right in identical twins gives an unlikeliness of only 19 per cent., while the same comparison in fraternal twins and ordinary single-born brothers and sisters gives a divergence of 38 per cent., twice as great.

Broke A Precedent

The Duchess of Hamilton, one of Queen Mother Mary's friends, broke a precedent at the coronation. She was the only duchess not wearing ermine. It was a gesture in her campaign against trapping fur-bearing animals. She wore rabbit instead.

Why is it necessary to have a church bell? People always get to a movie on time says the Brandon Sun.

"Can I interest you in our new gas stove, madam? I've just sold one to your neighbour."—11 420 Flowers

Serves Useful Purpose

Liberty Be Restrained

Whenever a new craze hits this continent, there are always those who assume that a new and permanent trend has developed. The motion picture was going to outstage the stage. The airplane was going to end the passenger train. The prefabricated house was going to put the builder out of business.

Now it is the trailer. Amateur statisticians have it all figured out that if the purchase of trailers continues at the present rate for 10, 12 or 15 years, the entire continent will be on wheels and no one will have a fixed abode. Municipalities will decay, property values will disappear and life will be completely changed.

Last year probably saw the trailer at the peak of its expansion. This year will see the trailers face to face with problems that were overlooked by the more enthusiastic forecasters a year ago. Already, municipalities all over the continent are imposing more rigid measures of control upon trailer camps. State and provincial governments will add their own regulations as trailers interfere with the normal life of permanent residents of different areas and as they cut into provincial and state revenues.

The trailer serves a most useful purpose in adding enjoyment and interest to a vacation. But once left the trailer interfere with property values or public revenues and it will immediately be made the subject of restrictive regulations and taxation. Let us not assume that the trailer has brought us a new way of life. The North American people are not a nomadic race. They will never consent to any legal or taxation advantages being given to those who uproot themselves from their home towns to become wanderers on the face of the concrete.—Financial Post.

Has Had Many Adventures

Many Sensations Provided For World By Sir Herbert Wilkins

Sir Hubert Wilkins, who has had applications from 4,000 people anxious to accompany him on a submarine journey to the North Pole, is probably the most adventurous living Australian.

For many years he has periodically provided sensations for the world in feats of daring and endurance. Born at Mount Bryan East, South Australia, in 1888, at twenty he set out on a round-the-world voyage which took him to 36 countries. Already an enterprising camera-man, he was signed on by a Parisian firm as a newspaper photographer at \$10,000 a year while still a minor. When he was 24 he became photographic correspondent with the Turkish army in the Balkan War of 1912-13.

His first taste of Polar exploration was in 1913, with Stefansson's Canadian Arctic expedition. Marooned in Arctic wastes, Wilkins did not learn of the expedition's success until 1915, and it was 1917 before he was able to get to France. In May, 1917, he obtained a commission with the Australian Flying Corps and later was made official photographer in the Australian historical section. While in France he was wounded nine times, twice mentioned in despatches, and awarded a military cross and bar. Since the war he has participated in a number of daring Arctic and Antarctic expeditions.

Human Adding Machine

William Souder, 14, of Fort Worth, Texas, is a human adding machine. In a public test, he added a column of ten three-digit numbers in 13 seconds, one second above his own record. In another test, he added a column of figures correctly two seconds faster than they could be computed on an adding machine.

The Swiss Federal Council has presented Princess Juliana of the Netherlands with one of the smallest watches ever made. It has a diameter of 6.5 mm. (just over one-fourth of an inch), and weighs 2.13 grammes.

"What would you do if you woke up and smelled smoke?"
"I'd go back to sleep."
"You would?"
"Certainly, I don't like toast."

Man-Made Lakes

Cost, Many Millions But They Pay Big Dividends

The greatest man-made lake in the world has been filling for two years, and is now 95 miles long and nearly 500 feet deep. In spite of the fact that a huge river is pouring its water into this vast lake it will be another year before it is full, and then it will be about 180 miles long.

This is Lake Mead, in Arizona, which has been made by damming the mighty Colorado river with a chunk of concrete weighing 300,000,000 tons. It will irrigate an area as large as Ireland, and turn burning deserts into flourishing farms.

Australia plans to spend \$40,000,000 on an inland sea which will pen back the waters of the Lachlan river and irrigate an area of 288 square miles for all their expansion.

The cost is huge, but these lakes pay. The Wilson Dam in the Western Ghats of India has 270 feet of water piled against it. The cost was \$5,000,000.

But the annual revenue is already \$210,000, and more than 200,000 people are able to get a living out of land previously so dry it was useless.

Tokio is making the largest reservoir in Asia, 30 miles north of the city. It is reckoned it will hold water to supply 8,700,000 people, and will cost \$100,000,000.

Give engineers a free hand, and they will do much more wonderful things than these. Two hundred miles from Fort Augusta, in South Australia, is the Lake Eyre basin, which covers 50,000 square miles. The mud flat which represents Lake Eyre is 3,500 square miles in extent. All around is desert, much of it below sea level.

Let it be the sea, and the whole climate of Southern Australia would be changed. Rain would fall, and the desert be turned to rich grazing. The cost, however, is reckoned at \$750,000,000.

The same result could be achieved by a cutting made from the Mediterranean into the desert of Sahara, west of Tunisia, where there has been no vegetation for 2,000 years past. All this country is below sea level, and was once sea.

An inland sea would be created about 250 miles across and would change the climate over an area three times the size of France.

Strict As To Quality

Canada Ships Only Highest Grade Turkey To England

A splendid success has been made of exporting Canadian turkeys for the Christmas market in Britain, the birds commanding good prices and being highly appreciated.

Perhaps it is the success of the turkey experiment, begun a few years ago, that has led to the improved market overseas for Canadian poultry in general. An official report states that Canadian chickens now bring the highest prices of all poultry imported, ranging from 22 to 28 cents per pound. This is also due to the fact that the Canadian authorities are very strict as to the quality sent to England, not only demanding a high grade, but checking up on the exports as they leave this side by exercising power to reinspect five per cent. of the boxes at port of shipment. That is the right way to ensure equality of quality. One bad crate might spoil the market for a whole season, and the whole Canadian product under suspicion.

It would be an excellent thing if this practice of grading and checking on the grading were applied to every class of farm product.—St. Thomas Times-Journal.

SELECTED RECIPES

CHERRY CORN STARCH PUDDING

1 1/2 cups juice from canned red cherries
3 tablespoons Benson's Corn Starch
1/4 cup cold cherry juice or water
2 tablespoons lemon juice
1/4 cup sugar

Method: Heat cherry juice to boiling in a saucepan. Mix Benson's Corn Starch and sugar to a paste with cold cherry juice; stir into hot juice. Cook over low heat for five minutes, stirring constantly. Add lemon juice; cook for 1 minute longer. Mould; chill thoroughly. Serve with whipped cream or "Crown Brand" Corn Syrup.

Upon being created a Knight of the Garter, a man must wear part of the insignia of the order day and night. Most of the knights wear the silver badge of the order during their sleep.

The mud-skipper fish of Portuguese West Africa cannot swim. This curiosity breathes through its tail and drowns if it goes out of its depth.

The unluckiest card in a pack of playing cards is the eight of spades, according to superstition. Napoleon Bonaparte ascribed his defeats to its influence.

A weight of 250 pounds is considered the most desirable weight for hogs at market. Selected light hogs, weighing from 155 to 195 pounds, are considered bacon hogs.

London's new subway passenger elevators travel at the rate of seven miles an hour.

Dominion And Provinces

People Of Different Sections Should Try To Fuse Together

In approaching the large question of the relations of the Dominion and the Provinces, as the country is doing now, everything depends upon the adoption by Canadians of a realistic, practical-minded attitude and appreciation of the great benefit that will accrue from clearing away the confusion that has existed for years and deciding upon a division of responsibilities which is actually best suited to present conditions with the social services and other problems that have come along in recent years.

The existence of a Confederation precludes the desire of the people of the different sections to get along together as well as they can. The more they can put together, the better for all. There has been a natural clinging to provincial jurisdictions and authority, but when a change in this respect is necessary, Canadians should be practical and wise enough to make it as well as this is required to replace an ill-balanced and rather befuddled government system, which retards the progress of the country, with a better-ordered and efficient system that will facilitate greater national progress.—Winnipeg Free Press.

Intelligence Not Impaired

Woman With Half Brain Has Superior Adult Mind

A 38-year-old Pittsburgh woman with only half a brain has learned in six months to do nearly everything she once could do when she had a whole brain.

With the half brain she rates an "intelligence quotient" of 115, on the Stanford-Binet scale. This is the mark of a superior adult mind and equals her once whole mind.

Her case, due to a recent operation in which the entire right brain hemisphere was removed, was reported to the American Psychiatric Association by Dr. Stuart N. Rowe of Pittsburgh.

She does not readily recall events since the operation but she remembers perfectly telephone numbers and addresses she knew before.

Usually Come High

Whatever The Outcome Strikes Are Very Costly Things

An observer estimates that the automobile strikes in Michigan cost a total of \$477,000,000. Of this amount, \$207,000,000 represented automobiles scheduled for construction; \$45,000,000 in wages lost by workers; industries supplying glass, wheels and other equipment lost \$137,000,000. Then there was the direct levy upon the State of Michigan and the various communities amounting to \$1,629,000 in extra relief costs. National Guard maintenance and lost sales taxes. Merchants and storekeepers, it is estimated, lost around \$18,800,000 in sales. Regardless of the cause or the outcome, strikes are costly undertakings.

Synthetic Rubber

To Be Manufactured in London On A Large Scale

Much interest has been aroused in commercial, scientific, and industrial circles by the recent announcement that synthetic rubber is to be manufactured on a considerable scale for the first time in this country.

The new material, whose chief compounds are coal, limestone, and rock salt, is to be called "neoprene," and its production is to be in the hands of Imperial Chemical Industries, Ltd.—London Observer.

While being tested in public, a new type of theatre curtain fell down and stunned a dance-band saxophonist. I understand, says the London Sunday Pictorial, however, that the makers cannot guarantee this.

WAKE UP YOUR LIVER BILE—

And You'll Jump Out of Bed in the Morning Ready to go

The liver sends out its bile daily. If this bile is not sent out, it builds up in the liver and causes indigestion, constipation, and other ailments. It is the bile that keeps the liver working and the body healthy. If you want to keep your liver healthy, you must take a course of Laxative Liver Pills. These pills will keep the liver working and the body healthy. They will also help you to sleep better and feel better in the morning. Ask for Carter's Laxative Liver Pills by name. Stubbornly refuse anything else.

Sees Famine In Future

Scientists Warn That United States Must Adopt Soil Fertility Measures

Scientists on a works progress administration soil inventory project concluded that agriculture in the United States must "die of its own neglect" within 200 years unless the "population" follow suit unless soil fertility measures are instituted.

The project, which state WPA Administrator William H. J. Ely said he believed was the first of its kind in the world, is directed by Dr. Jacob C. Lipman, chief of the division of soils and crops at the New Jersey agricultural experiment station at New Brunswick.

Using soil samples from 48 states to determine chemical resources, the WPA workers calculated that nitrogen, vital to plant life, will be exhausted from the soil within 224 years, sulphur will have disappeared by 2062, and "the eventual result will be a China-like famine in the richest country in the world."

"The soil nutrient losses were blamed on erosion, leaching (the action of water seeping through the earth); harvesting, livestock, burning and the rapid oxidation of organic matter in the soil.

Not Hard To Do

Writing An Advertisement Does Not Require Any Great Skill

The remark is frequently made by merchants, that they believe in advertising, but they do not know just how to write an effective ad. To which the reply is simple, that it does not take any particular skill to write a good selling notice. Of course, a clever writer may do somewhat better than others, but in the main what the public wants is information about goods, not smart wit and selling stuff.

If a merchant will simply tell the facts which are his opinion make certain goods a bargain, and give the prices of the goods, those simple things are enough to constitute a good advertisement. They interest the public, which is always looking for values. The description of any bargain is as interesting as any news in the newspapers.—Sarnia Canadian Observer.

Train Pilots In Vancouver

Reported Men Chosen For New Trans-Canada Air Line Will Be Trained At Coast City

The Vancouver Daily Province in a newspaper story said it had learned pilots chosen for the new trans-Canada air line will be trained in Vancouver this summer.

The paper said that by fall it was believed there will be "sufficient trained personnel" operate the Keithridge-Winnipeg branch of the trans-Canada line.

Although Major D. R. MacLaren, appointed to the administrative staff of the new line, has made no official announcement, the paper said it was "understood" the move would take over the Vancouver-Seattle air mail route and two planes now owned by Canadian Airways, Ltd.

Cuba is operating 149 sugar mills, compared with 130 last year.

A REVOLUTION IN THE KITCHEN

Presto-Pack is a new and revolutionary way of handling Household Wares. It has been developed, packed in an envelope which you hang on the wall. Then as you require it, just draw out a sheet at a time. You can't draw more. That's the beauty of it.

Try Presto-Pack today. You'll find it the handiest thing in the kitchen.

At grocers, druggists, stationers and department stores.

A Mine Of Interesting Information About Canada In Archives Of Dominion

Canadian history falls naturally into four divisions—French rule, British military control from 1763 to 1794, civil government from 1794 until Confederation, and the post-Confederation policies which still exist today.

The story of the first of these groups, the French regime, is a fascinating one. Composed partly of original papers and partly of transcripts from Paris, the section contains all the royal orders to Canada—covering almost 100 years of varying fortunes. Records of the ministries of war and marine show the alternating moods of lavish generosity and strict economy—of sheer neglect—which characterized French rule in Canada. Among the private papers included in this section are those of Bigot, most likely of intentions; Montcalm, lovable, hotheaded and impetuous; Bougainville, gallant soldier, but even more noted as a navigator; Radisson, whose story is the story of the Canadian fur trade, and last, Johnstone, that dour Scots Jacobite who poured out the bitterness of his heart on the faded pages of his journal. These letters show the gallantry, the hopes and fears, and the petty jealousies that were both the foundation and ruin of New France. Truly a wonderful picture!

Nor is the picture of Canada under British rule any less complete. Among the original papers are also the military records of the country from 1763 to 1870—of which more later—the minutes of the various legislative councils, correspondence with the secretary of state, and the letters of the many governors from the time of the conquest to Confederation. The archives also hold many transcripts from the public records office and the British Museum—this among which are the Boquet and Haldimand papers—those two Swiss soldiers-of-fortune who left such a mark on American history. The collection of state papers from New Brunswick, Nova Scotia and Prince Edward Island are also taken from this same source. The collection of private papers covering these years is of great interest. Letters of Wolfe, Moncton, Townshend and Murray throw light on that grim drama played at Quebec. The collection of the finest combined naval and military campaign ever carried out. For later days, and the political development of the country, there are the letters of Dalhousie, most minutely of government, and Lord Durham, whose famous report is the foundation on which the Dominion was built. Sir John A. Macdonald's papers—a library in themselves—show Canada before and after Confederation; a fitting memorial to a great man. In truth, the student cannot complain of paucity of material. Rather it is a matter of proceeding with care and discrimination among the wealth placed at one's disposal.

There are in the archives 50,000 volumes and portfolios of indexed manuscripts; in addition to this many thousands—including the Canadian war records—have not yet been collated. The maps, including charts and plans—many of which are original drawings—number some 30,000; the oldest map in the collection being dated 1560. The actual number of pictures and prints is unknown. About 2,000 are framed and on display; and, in all, there are 15,000 catalogued. In the library there are 30,000 books—all relating to Canada and Canadian history. There is also a fine collection of pamphlets, old newspaper files, and journals.

Sir Leicester Harnsworth, who died at Beihill-on-Sea recently, will be gratefully remembered by Canadians for his donations to the Canadian archives of Sir Wilfrid Laurier's library and also of the Northcliffe collection of letters, diaries and manuscripts relating to Canada—Canada Weekly, London, Eng.

By Royal Permission

Names Have Been Chosen For New Series Of Locomotives

The L.M. & S. Railway Company announce that, by Royal permission the following names have been chosen for the five new streamlined locomotives of the "Princess" series now under construction at the company's Crewe works, and intended for the impending 6½ hours express service between Glasgow and London: No. 6220, Coronation; No. 6221, Queen Elizabeth; No. 6222, Queen Mary; No. 6223, Prince Alice; and No. 6224, Princess Alexandra (after the daughter of the Duke and Duchess of Kent).—Edinburgh Scotsman.

Wealth In Forests

Finland is a large country, but the cultivated area is very small. The wealth of the nation is in the great virgin forests of pine, spruce, birch and fir which cover the rocky surface of the land, including 80,000 islands which rest in the 60,000 lakes with which Finland is jeweled. The railways in Finland are the cheapest in Europe, and it is possible to travel 900 miles for \$5.

Democracy has its little faults, but it doesn't keep a scared world trying to soothe one wild man's feelings.

State Coach Uncomfortable

And Coachman Has Dangerous Perch On Mere Bar

The sum of \$40,000 would buy a lot of comfort in transportation nowadays. But George III. had no conception of modern ease and only an eye for the ornate.

As a result the parliament of his day paid for a state coach which is appealing to the eye but, sprung from leather straps, provides a rough ride for its occupants.

But the coach, despite its many jolting, rattling, jouncing, or London's cobblestoned streets, is made of stern stuff, and was probably a good investment. For at 176 years it still looks like new. And it is a tribute to the original workmanship that the same wheels and axles which carried George III., George IV., William IV., Queen Victoria, Edward VII., George V., also carried King George VI. and his consort to their coronation.

Designed by Sir William Chambers, the coach bears paintings by the famous Florentine artist, Giovanni Battista Cipriani. With the exception of the panels, roof and leather springs, the coach is covered entirely in gold leaf. Like the coach itself, the wheels are heavy and ornately carved.

While the occupants are anything but comfortable, the coachman's position is almost bordering on dangerous. He rides on a seat which is a mere bar and the postillions do most of the driving.

Mermen blowing on conch shells support the coachman's uncertain position. At the back of the coach are Neptune figures bearing tridents, a gold crown, similar in design to the crown of St. Edward, surmounts the demerit roof.

Will Be Great Boon

If Dandelions Can Be Killed Without Injuring Grass

We are told that the University of Manitoba chemists are working out a preparation that will kill dandelions without injuring grass.

We hope it is true and that the chemists are not too busy with their experiments to meet with every success. Of course it is true that if they do meet with a full measure of success, we would lose a lot of color out of the landscape and out of our lives.

A field of dandelions in full bloom is an impressive sight and even a beautiful one—at a distance. But somehow they always look better on our neighbor's lawn than they look on our own.

And they always look better on our neighbor's fields than on our own, too. But we are quite unselfish about it. Quite willing for them to have the beauty as well as the milk and butter taken from their fields.

In recent years, however, there have been more than enough dandelions to go round. More than enough for every lawn and every field, and they have increased to the point where they have become a pest, and that is why the Manitoba chemists' dream will be true.—Seafarmer's Express.

A New Machine

Invention Of Belgian Engineer Extracts Moisture From Air

A machine which extracts moisture from the air, and is expected to be of great service in countries where the water problem is acute, has been constructed at Trans, in Provence, by M. Knippen, Belgian engineer.

The machine consists of some twelve meters high. The inner casings, which form a passage for the air, are two and a half meters thick. In the interior 5,000 plates gather the condensed moisture provided by the variation in the temperature during the day and night. The amount of water resulting depends upon the numbers of the plates, the moisture content of the air and the extent of the variation in temperature between day and night.—Christian Science Monitor.

A Strange Confession

Toronto Dentist Says He Is Scared To Sleep In Chair

Dr. J. B. Greer, Toronto dentist, told the Ontario Dental Association convention he was "scared stiff" of a dental chair but he tried out a new application of nitrous oxide or laughing gas and remarked afterwards: "That's great." The new machine allows a patient to administer as much laughing gas as he feels he needs while having his teeth treated. The patient remains entirely conscious taking only enough anaesthetic to eliminate pain.

A New Wake-Up

Richard Hess, a sound-sleeping New York college boy, who has himself grown immune to alarm clocks, contrived a complicated device. At 7 a.m. the alarm goes off, starts the radio and dumps a glass of cold water in his face. Now the grin and yawn of Mr. Hess answers to roll-call with washed and shiny face as bright as any of his classmates.

Must Develop Trade

Canada Must Buy Products From Wheat Importing Countries In Order To Sell

Canada must buy products from wheat importing countries if she is to sell her wheat no matter what her marketing methods may be, declared James R. Murray, Winnipeg, chairman of the Canadian Wheat Board, in appearing before the Turgeon royal grain commission at Regina.

Statistics submitted to the commission by Mr. Murray showed that the board on Dec. 13 last held 54,491,000 bushels of wheat compared with 84,688,652 bushels at the end of the crop year, July 31, 1936. Mr. Murray declined to disclose sales for the calendar year 1937 to date on grounds it was not in the public interest.

Importance of sales to European countries was emphasized by Mr. Murray. With restoration of normal conditions in Canada, a greater share of the markets for wheat available in continental Europe would have to be obtained by this country if piling up of "unwieldy surpluses" was again to be avoided.

"There should be no need to stress the impossibility of Canada obtaining the share which it should of these continental markets unless we are prepared to buy larger quantities of the goods these countries can export," Mr. Murray added. "It must be obvious that the normal production of Canadian wheat cannot be successfully marketed abroad through either wheat board, open market or pooling systems unless our trade relations with the principal wheat importing countries are competitive with those countries that are our competitors in the world wheat trade."

Each market was important, no matter how small the sales, he declared. Mr. Murray added: "It must be obvious that the normal production of Canadian wheat cannot be successfully marketed abroad through either wheat board, open market or pooling systems unless our trade relations with the principal wheat importing countries are competitive with those countries that are our competitors in the world wheat trade."

"Neither the quality of our wheat nor the competitive price for it will suffice to get the business if restrictions of our part against imports make it impossible or extremely difficult for importing countries to pay for our wheat."

The study of trade relations which the board had made should be continued, Mr. Murray said. He recalled appointment of R. V. Biddiph, of London, as the board's European commissioner and to the publicity work which is now being carried out to promote sale of Canadian wheat.

Expressing his hope that the inquiry would "see fit to emphasize the necessity of action being taken which will make possible the sale of additional quantities of wheat in these 'prosperous' countries," Mr. Murray added he believed the advertising and publicity work should be continued regardless of "whatever system is used for marketing Canadian wheat in the future."

Stores Subsoil Moisture

Basin Later Being Tested On North Dakota Farms

A newly developed farm tillage implement which, tests have shown, doubles or triples subsoil storage of rainfall for future needs, is watched with increasing interest by wheat farmers in North Dakota.

Lack of moisture during the growing season long has been one of the principal worries of plains state farmers.

With this in mind engineers designed the basin later which, by an ingenious arrangement, dams the furrows at intervals of about every 10 feet, creating thousands of shallow holes in a field—all potential soil moisture, ready to receive and hold the rain water until it drains into the subsoil.

Immediately after harvest season last year agricultural engineers came into the Minot and other plains state areas and fields were basin latered.

Within recent weeks hole dug in these fields have revealed moisture to a depth of 40 to 50 inches, compared to four to 12 inches where no attempt has been made to store the rainfall.

Stands of wheat on basin latered fields are reported in excellent condition through the area, excepting the "dust bowl", where blowing out the young plants to pieces or smothering them.

Had Him Worried

A young Canadian girl, a resident of Kingston, Ontario, while visiting some friends in England, decided to send a cable home, and having written it out, handed it to a clerk in the cable office.

The clerk appeared to be rather worried about it, and, after consulting various reference books, said to the girl: "I can find Kingston-on-Hull and Kingston-on-Thames, but I cannot locate Kingston-on-Texas."

Worked In A Circle

When rats overrun Sable Island, Nova Scotia, cats were imported. They killed off the rats and began on rabbits. Foxes, introduced to fight the cats, not only killed all the cats, but the rabbits, as well, and the people appealed to the government to exterminate the foxes.

There is an average of one type-writer to every 100 persons in the United States.

As used in card games, the word "trump" is a corruption of the word "triumph" as pronounced in French.

Started Wide Hunt

Druggist Thought He Had Given Poison For Medicine

A druggist's error sent police of three states into action to save a woman from taking poison. Mr. and Mrs. Herbert Sigbee had been visiting in South Bend, Indiana. There they had a prescription for sinus medicine filled. Then they left to drive to their home in Portsmouth, New Hampshire.

The druggist's anxiety resulted in an appeal to police. Calls went out over police radio systems. A message was sent over the interstate telephone system asking authorities to be on the lookout for a maroon sedan in which four persons were riding.

According to the message sent to Acting Detective Chief Frank J. Leigh, Mrs. Sigbee had a bottle of deadly poison which she obtained by mistake when she ordered the sinus prescription.

Then Buffalo police received a message that the Sigbees car had been stopped in Euclid, Ohio, a suburb of Cleveland. Two Euclid police cars spotted the auto at the same time.

"You didn't use the medicine, did you?" called Lieut. Rosinski back. "Why, yes," Mrs. Sigbee replied in astonishment. "It helped me a lot."

Out came the bottle. It wasn't poison. That was the druggist's error.

Slaughter Of Robins

Large Number Were Killed And Sold In North Carolina

Five and twenty blackbirds went into a famous pie. A pie can also be made of five and twenty robins. Unlike the blackbirds, however, the robins won't fly out.

That's why some of your favorite robins haven't shown up this spring. They were laid out for sale with worms. They were sold for two cents apiece.

On their way north, millions and millions of the perky red-breasts assembled in a swamp near Chapel Hill, North Carolina. They filled the sky by day. By night the pines and cedars bent under their weight.

And at night, hundreds of men and boys went in and slaughtered the sleeping birds wholesale with clubs. The robins were worth just two cents each in the neighboring cities of Durham and Burlington.

The same thing happened at other points where the robins congregated on the journey northward. Expressing his indignation, the United States Biological Survey and the State Conservation Department sent agents in to stop it.

In such a manner was the passenger pigeon exterminated. For a time the robins were the worst and the range-killing instruments never stop even for a moment.

"I was the nearest person to the King during the battle, working my instrument in communication with his until the German fleet turned away from the fight."

Deserves To Succeed

Woman Pacifist Trying To Do Away With Toys Suggesting War

Children will play with tin soldiers no more if Mrs. J. P. Herring, an ardent New York pacifist, has her way. At a recent meeting she advocated an attempt to convince toy manufacturers that there is a market for lead postmen and hod carriers and other workers of society, instead of toy soldiers.

Plenty of energetic tools and toys can be given to children to use, so that toy pistols will gather dust simply because they are inadequate in holding the interest when compared to less objectionable playthings.

A Canadian professor told the Board of Trade of Toronto recently that, if women had not gone on reducing diets, there would have been no world depression. Isn't it astonishing how much some of these college professors know?

Another reason why romance lasted longer in the old days was that a bride looked much the same after washing her face.

Make a Summer Hit—It's Quickly Knit

Household Arts by Alice Brooks

You'll have travel, sports and dress coat-in-one in this handsome jiffy-knit style that invites immediate making! Start now on the simple rib stitch that makes the body and sleeves. Cuffs, border and yoke take stockinette stitch. German wool's bold light and warm. In pattern 5534 you will find complete instructions for making the swaggar coat shown in sizes 16-18 and 20-22; an illustration of it and of all the stitches used. To obtain this pattern send 20 cents in stamps or coin (cash preferred) to Household Arts Dept., Winnipeg Newspaper Union, 175 McDermott Ave. E., Winnipeg.

There is no Alice Brooks pattern book published.

Interesting Bird City

Thousands Of Tourists To Gape Coast Every Year

Thousands of tourists annually visit the Gape coast in the vicinity of Pease Rock and Bonaventure Island attracted largely by the spectacle provided by colonies of sea birds which nest on the great rock and on the ledges of the island.

Pease Rock, with its sheer sides rising directly from the water for nearly three hundred feet, and its great arch passageway, eighty feet in span, through which small boats may pass, is a breath-taking attraction in itself, and thousands of sea birds nest on it and on Bonaventure Island. More than 13,000 gannets—great white birds as large as geese, with black wing tips—make their summer homes here. Thousands of them, looking at a distance like great snowbanks, sit close packed in the ledges, while hundreds of others soar and wheel majestically over the sea before the precipice.

Other remarkable sea birds, including common and uncommon species, form part of this great assemblage. This interesting bird city is so situated that it may be observed and photographed conveniently without harming or disturbing its feathered citizens. Sea-going motor boats carry parties of visitors past the lofty cliffs where the gannets nest, and there are excellent points of vantage on the land at the top of the cliff and on the crest of the mainland cape opposite Pease Rock—Canadian Resources Bulletin.

Had Important Duty King George VI. Was Range Finder In Battle Of Jutland

How the accuracy of the guns of H. M. S. Collingwood at the Battle of Jutland, depended on the skill of King George VI. to work the calculating instruments in the foremost turret of the ship was disclosed at Belfast by James Moffatt, former petty officer, with the present King at the time.

His Majesty displayed an utter disregard for himself and with great zeal and earnestness put every ounce of his royal manhood into his fighting duty, for which he was highly commended," Moffatt said.

He described the King's work as "a very important duty, upon the accuracy of which the guns depended for their hits."

"This operation begins as soon as the enemy is sighted and continues until the 'cease fire' is sounded," he continued. "During all this time the guns are trained on the enemy and the turret is completely sealed from the outside world. No one ever enters or leaves the turret and the range-killing instruments never stop even for a moment."

"I was the nearest person to the King during the battle, working my instrument in communication with his until the German fleet turned away from the fight."

Celebrates Diamond Jubilee Second in size among Canadian universities, the University of Manitoba has celebrated its diamond jubilee. Sixty years ago, the university made an inauspicious beginning and grew steadily, until today it has an enrolment of 2,469 students in regular courses and nearly as many again in summer school courses. It stands second to the century-old University of Toronto.

A Big Timber Craze The biggest "timber craze" ever contrived was staged near Gloucester, N.S.W., when 100,000 tons of tall trees were felled down a mountainside for the benefit of movie cameras. Thousands of trees had been partly severed so they would fall when the topmost section was dynamited. Ten cameras were used to record the monster crash.

Automobile horns may be installed on trolley cars of England shortly.

Hard To Understand Dreadful as the Hindenburg disaster is, it is not strange, asks the Hamilton Spectator, how it impressed the public far more than the wanton murder of 800 men, women and children at Guernica, Spain, by flyers? Forty dead near bag of gas seem to dwarf the massacre of 800 other innocent souls. Why?

Postmen delivering such letters must hand them personally to the addressee. Not even members of the addressee's family will be permitted to take such letters from the hands of a mailman.

For Greater Protection Czechoslovakia Has Issued Special Stamps For Love Letters Czechoslovak postal authorities took steps to ensure that the course of true love should run smoothly and secretly through the mails.

To this end, authorities decided upon issuance of a special triangular stamp for love letters. Postmen delivering such letters must hand them personally to the addressee. Not even members of the addressee's family will be permitted to take such letters from the hands of a mailman.

Efficiency Of Rural Schools Cannot Be Maintained If Teachers Are Poorly Paid

Easy When You Know

Spelling Does Not Govern Pronunciation Of Many Names

The moment we saw the name "Hinchinbrooke" on the Aquitania passenger list we started trying out pronunciations. But the Rt. Hon. the Viscount Hinchinbrooke, heir of the Earl of Sandwich, let us down badly. He pronounces it Hinchin-brooke.

We don't think it was unreasonable of us to decide that it was pronounced "Hibber"; after all the Viscount comes from a country where they spell a town's name "Saw-bridgeworth" and pronounce it "Sapper." And recently on the Ile de France we met a Mr. Bouchamp who called himself "Beechum."

Our notes on passenger list names include a Mrs. Belvoir who simmers it down to "Beaver," and the various members of the Bourjois family, from England, who come and go all the time and always have to explain to Americans that they call it "Bur-joyce."

When we approached the Viscount on the pronunciation of his name he said, "Oh, I say, I see what you mean, like pronouncing Chomondrey, 'Chumley.'" We told him that was exactly what we meant and asked him if there was any truth in the story that Lord Bontomey once called on Lord Chomondrey and left word that "Lord Bumley" had called. He didn't know about this.

The Beaulieu clan complicates things by calling it "Bevlee," and although we have never had the pleasure of meeting the Marjorie-John family, we were told by a steward on the Berengaria the last time they arrived to be sure and pronounce it "Marchbanks."

We have, however, encountered the Frushkams, who dropped the difficulty down to practically nothing by pronouncing it "Ferson." But who are we to talk, who have a silent "g" and "h"? Dixie Tigh, in New York Post.

Plenty Of Certificates Every Citizen Of New Reich Must Have Four

It has been decreed by the Berlin authorities that every citizen of the new Reich must have four certificates. The first certifies to occupation, and must be filled in whenever the holder seeks the smallest job. The second has to do with health, recording the up and downs of physical well-being. The third is a family certificate stating the purity or otherwise of his Aryan family history. The fourth is concerned with his military service. There are many other certificates, all bringing joy to unnumbered inspectors and supervisors, but increasing the ire of many who must carry them.

Build Nest Of Steel Bird Used Metal Thrown Out By Swiss Watchmaker

We hear of a watchmaker living in the Canton of Soleure, in Northern Switzerland, who was accustomed to throw out of his window fragments of steel springs and other metallic oddments. He was interested in watching a wagtail go on with these one by one. On following the bird he came across a nest entirely built and lined with metal. Continuous watch was kept, and it was seen that eggs were laid and a brood duly hatched. When all was over he collected the nest and took it to the Natural History Museum of Soleure.

For Greater Protection Czechoslovakia Has Issued Special Stamps For Love Letters Czechoslovak postal authorities took steps to ensure that the course of true love should run smoothly and secretly through the mails.

To this end, authorities decided upon issuance of a special triangular stamp for love letters. Postmen delivering such letters must hand them personally to the addressee. Not even members of the addressee's family will be permitted to take such letters from the hands of a mailman.

The efficiency of rural schools in Canada is a problem inseparably linked with the salaries of teachers, and the present situation in that respect is the subject of a report by The Bureau of Statistics. The Bureau's findings are summarized by it in these words:

"Salaries of teachers in one-room schools have been reduced more than one-half in one or two provinces; in several they now average only one-third of what the city teacher is paid and at best are not more than one-half; in a majority of the provinces the average is well below \$500."

With this result: "These teachers are moving from one school to another every year or every second year in an attempt to better their position, where the city teacher remains in her position from seven to ten years. It follows that they receive lower certificates and less experience than city urban teachers, though it can hardly be said that their task is proportionately less difficult."

The tables do not cover the provinces of Nova Scotia, Quebec and Alberta, and for Ontario the returns are not complete, but enough is revealed to indicate the gravity of this national problem of the rural school. A surprising number of teachers in one-room rural schools receive less than \$300 a year—twenty of them in Prince Edward Island, 78 in New Brunswick, 21 in Manitoba, 19 in Saskatchewan, one in Ontario. The largest group, except in Ontario received between \$400 and \$500—Ontario's largest group were paid between \$600 and \$700 each. The classes above \$700 a year include only two teachers in Prince Edward Island, 11 in New Brunswick, 37 in Manitoba, 113 in Saskatchewan, but 1,700 in Ontario.

It is useless to expect efficiency in the rural schools on salaries of six, eight or ten dollars a week, and we have no reason to be proud of paying members of the hopelessly essential profession of teaching less, in many instances, than we pay casual laborers. Nor is the teacher the sole, or even the principal, sufferer. The quality of the profession is bound to suffer, in the underpaid rural schools, even at a pitiful wage. Those in it are concerned largely with getting out of it. There are, as the Bureau of Statistics points out, frequent changes of teachers. The interests of pupils inevitably suffer, and the cause of education is hampered.

The fact that the situation in Ontario relatively is good must not blind our eyes to the other fact, that in other parts of Canada there is reason for great concern.

There is too great a tendency to stave the rural schools, and provincial governments must take the major share of responsibility. To spend parts of Canada roads, for example, while rural teachers are paid \$300 to \$400 a year, does not make an impressive picture. The provinces cannot shelter themselves behind school trustees and rural taxpayers, and say the situation is in their hands. It is the business of the provinces to see that educational standards are maintained, and they have no more important business—Ottawa Journal.

Encouraging Inventors Child Mechanics In Russia Are Helped By Government

Russia is seeing to it that child mechanics are supplied with the articles needed in their inventive enterprises. It maintains a store in Moscow for this purpose and has a consultation service with a specially trained force. The government recently made a survey of the activities of the 100,000 members of the Moscow Central Children's Station. Youngsters are building 56 children's railways, a dozen river, lake, or seaports and airplane models with gasoline engines. They have constructed a miniature sugar factory now operating.

BLANKET DEBT LEGISLATION

(The Hanna Herald)

Blanket debt legislation is ill-advised, unfair and harmful. Alberta people need expect no permanent advantage from such laws. On the contrary, they will do irreparable harm.

Most people are honest. The great majority of debtors want to pay. Alberta people are not the chiselers and defrauders that they now appear to be before the eyes of Canada and of the world.

There are a considerable number of Alberta farmers, however, who simply cannot meet their mortgage obligations. Bad crops and low prices over half a dozen years have robbed them of their earning power. These people must have special consideration.

The way Manitoba and Saskatchewan tackled the problem of farm mortgage indebtedness was reasonable and sensible. First they got the interest rate cut to six per cent, which is where it should be. Then they arranged with the lending institutions for adjustments in instances where arrears of interest had accumulated. This erased the debtor's name from the role of those in arrears and gave him a fresh start and a new encouragement.

In Saskatchewan alone, fifteen million dollars were written off mortgage indebtedness through compromise co-operation, and a comparative amount was relieved from debtor's backs in Manitoba.

In Alberta today no debtor knows for sure whether he has been relieved of a cent of accumulated indebtedness. Blanket debt legislation has been a curse rather than a blessing.

A man who can pay should pay. A man who can't pay should be aided. Blanket debt legislation does not work that way. A plan of compromise and adjustment does work that way.

Alberta is not completely down and out—sunk for all time. This province can and will come back. The time will come when our farmers will again require credit. That is something our people should never forget.

So let us handle the present problem of debt in a reasonable, sensible and decent manner. Let us follow sound British tradition and example. Let us forget this South American idea of default and blanket debt legislation. Such a move is a step in progressive human degeneration.

The new fitted Ladies' Overnight Cases, Pakite Wardrobe and Dressing Cases in Genuine Rawhide and Orient Woven Tweed—they are beautiful and in great demand—Lacombe Furniture Store sells them.

Social Creditors Endorse Stand of Local M.L.A.

BENTLEY.—Zone No. 6, Lacombe Constituency, Social Credit League, held a meeting at the home of H. P. Hansen on May 28th, with groups of the zone well represented.

Mr. Bentley, Gilby, Lockhart and Medicine Hill.

D. Bruce MacMillan, M.L.A., was present and gave a very clear explanation as to why he could not agree with the government on some of the bills put before the House.

Mr. MacMillan's stand was endorsed by the meeting and those present felt proud that they had a fighting man and not a "Yes" man.

C. E. Waddy, a member of the Alberta Social Credit League Board, outlined some of the work performed by the board since its inception.

Resolutions Endorsed
J. F. Miller, Bentley, president, and the following resolutions were endorsed:

1. That we are 100 per cent behind our M.L.A. on the stand he has taken, and we want him to work for Social Credit.

2. That the Government compromise with the M.L.A.'s to put in Social Credit.

The ladies served a dainty lunch and a very hearty vote of thanks was tendered Mr. and Mrs. Hansen for their hospitality.

Spring Valley

SPRING VALLEY.—Mr. and Mrs. D. T. Whitney, Sr., of Spring Valley, Mr. Sladen, Shirley Monis and Miss Adams of Lacombe and Mr. and Mrs. C. M. Miller of Eureka were visitors at the home of Mr. and Mrs. H. O. Sims on Sunday.

Mr. Campbell gave the sermon at the church on Sunday. Those who were not there missed hearing a good discourse. Comments to his effects have come from all quarters.

Mr. Campbell and family are from Killam and are assisting in the mission service at Clive this week.

Mrs. C. Monts, who has been visiting with her mother, Mrs. Playfair, for some time, recently gave birth to a daughter, and they are both doing well. Mrs. Monts lives at Enfield, Alta.

We are glad to know that Muriel Call is recovering nicely from her recent auto accident, when she suffered a broken arm. Difficultly has been experienced in setting the bone, which had to be set three times.

The special music for the church a week from Sunday will consist of a duet by Gordon and Dorothy Call. We are sorry to report another death in our community, that of Mrs. John Russell, Sr., of Joffre, who was buried on Saturday of last week.

We understand death was due to heart failure.

Mrs. D. G. Whitney, Sr., was taken very ill last Monday with gallstones. Dr. Lockhart having been called. On Tuesday she was brought to Lacombe, to the home of her daughter, Mrs. Ellis, who is attending her. Her friends in Spring Valley all hope for a quick recovery.

Coronation Letter

In last week's Western Globe

Miss Elizabeth Sage of Lacombe, who is now on her way to a description of pre-coronation events in the world metropolis, concluding by describing the first part of the Coronation Day parade. In this issue Miss Sage describes the balance of parade and other interesting details.

Then came the Prime Ministers and Colonial Rulers—first Premier Baldwin and his escort of Metropolitan Police, and then, joyfully, the King and Queen, the R.C.M.P. And before I go any further, a word about the Mounties, both King's escort and the Continent.

I was in an all-English group and I've heard comments from every other source and the Mounties were the favorites. And a lady near me remarked: "Do look at their horses, they're behaving so well—better than any of the rest." Good old Canada!

The rest of the troops escorting the Prime Ministers were good, too, particularly South Africa and Australia. The King's and Queen's Colonial representatives looked like something out of story books.

Royal Family Arrives
After this came the Royal Family—in the first carriage, Princess Mary, Princess Elizabeth and Margaret Rose and Lord Lascelles. The Princesses looked charming. The second carriage contained the Duchess of Gloucester and Kent and the Hon. Gerald Lascelles. The Duchess of Kent was beautiful and the Duchess of Gloucester looked most charming. She is, I believe, very popular.

The next carriage had Prince and Princess Arthur of Connaught and Princess Alice of Athlone.

Queen Mary's carriage with herself and the Queen of Norway came next and Queen Mary was a picture—so regal and calm. Between all these carriages, of course, were Captain's escorts and troops, so that it took a great deal more time than it takes to tell it.

Next came the Procession of their Majesties, the King and Queen, the length of sufficient to make a general procession—detachments from Artillery and Cavalry troops. The Band of the Royal Scots Greys thrilled me most—mounted on beautiful grey horses.

The King's Indian Orderly Officers were a glorious splash of color. There were representations from all the troops of the Empire, all mounted, and mounted on such perfect horses!

Grand Array of Color
One contingent of Life Guards was in uniforms of scarlet, gold and white, mounted on jet black horses. The pictures were marvelous arrays of color.

Finally after an age came the State Coach, drawn by eight grey horses, containing the King and Queen. A band just below us played "God Save the King," while all the troops stood rigidly at attention.

The coach itself is a magnificent thing, heavily laden with gold engraving. It would be useless for me to try to describe it—other people can do it better.

And so passed the King and Queen. I heard a bit afterwards about the Abbey service, and of course we listened to it by means of loud speakers.

A friend of mine was fortunate enough to get a seat in the Abbey, from which everything could be seen. He was particularly impressed with the scene when the King, having been disrobed, knelt before the Altar—the absolute simplicity of his white garments was such a contrast to the panorama around him.

We sat until the Communion Service began and during this time there was always something happening in the Square—period St. John Ambulance men would carry out someone who had fainted in the crowd or a dog would saunter across it—it wouldn't be an English crowd if the dogs were missing.

Didn't Care for Apples!
During this interval a truck drove up and distributed lunch bags to the cadets from Sandhurst Military Academy, who were lining the entrance to the Abbey. So they all stood at ease and ate their lunch and I'm sure most of them were English—they didn't eat their apples and the garbage man tried to rescue them, but had to give up. There were too many.

Shortly after this we went for lunch in the Press Gallery Dining Rooms, a lovely buffet luncheon, but we had to rush, because the return parade had started.

The return parade was even more colorful than the first—more troops, and the R.C.M.P. contingent in full force. The Maple Leaf Forever!

The bands were glorious and particularly the Pipe Band of the Highland Light Infantry. Again came the Prime Ministers and Royal Family. MacKenzie King got a glorious ovation.

On the return trip, Princess Elizabeth and Margaret Rose were with Queen Mary, the Princesses with their crowns on. Princess Elizabeth was more sedate but little Margaret Rose wanted to hop, and every time she did, her crown got tilted. She went past us with it at a decided angle.

Then came the King and Queen's Procession. I forgot to mention before the Bee-eaters from the Tower in their quaint costumes, marching in the King's procession. They do look glorious, but the anti-climax was to see them when it was all over, going back to the Tower in a charabanc.

Looked Marvellous
The King and Queen looked marvellous in their robes of state but I'll bet they were glad when it was

Blackfalds

BLACKFALDS.—The concert held by the W.W. last Friday was a great success. Much of the program was contributed by local talent but several outsiders also helped, and a wide variety of instrumental and vocal items were given.

The W.W. served a good luncheon after the concert and all those who attended had a very enjoyable evening.

Irwin Goodwin is repainting the outside of the Martin home.

We now have further information regarding the school meeting which was held last Saturday evening. Inspector Thurber was present at the meeting and explained to those present that if the third room was not added, the school would only be able to teach up to Grade 9, under the new regulations of the department.

It was also pointed out that the third room would practically pay for itself, as it would procure an increased grant from the Department of Education; also that, in the event of this district desiring to give their children a High School education, this school district would have to make payments to whichever districts the pupils were sent.

Another point brought up was that property in this area would increase in value with the addition of school facilities. The vote on the extra room is to be held June 15th.

Dust Storms Cause Damage
The severe dust storms and the strong winds of the past two weeks have done considerable damage to crops hereabouts, and in a few cases farmers have decided to re-seed their fields for green feed. A good deal of property has been damaged, and the farmers, although much more moisture is needed.

The W.W. held an enjoyable meeting last Thursday at the home of Mrs. McEwan, with a large turnout. With a view to raising funds for the hall, cash members made or bought a 25c present for a member whose name was drawn from a hat. The result was that a wide variety of useful gifts were distributed. Arrangements were made to hold a picnic early next month. Mrs. Fackler sang during the meeting and Miss Arrowsmith won an art exhibit contest which was held.

Mr. and Mrs. Emil Schmidt left for Wisconsin last week, for a reunion. The afternoon previous to their departure the L.P.W.A. met at their home to wish them "God speed."

The Red Deer Health clinic is showing some health moving pictures in Blackfalds Hall on June 16 at 8 p.m. There will be no charge and all parents and children will be welcome.

The Mediterranean Sea is 2100 miles long.

all over. Such an ordeal! Just after they passed us the rain started and I was glad I was under cover.

Later I was shown over the Press Gallery, where I saw some rare old prints of the Great Fire.

I've never seen such dirty streets in my life as the streets in London after the parade, but they were soon cleaning them. And stands were coming down, too. I suppose tomorrow we won't recognize the place. I walked home, had supper and here I am, tired but happy. I've been to the Coronation—the King's speech is over, he didn't stumble and I feel easier.

Bed was welcome.

Round the World Supper Given by C.G.I.T. Girls

BENTLEY.—The Bentley C.G.I.T. girls spent a very enjoyable evening on Monday, May 31st, when six girls held a business meeting in their homes to a "Round the World Supper" given to members of the group and their leader, Mrs. C. A. Warren.

Miss Dorothy Talbot, cocktail; Miss Margaret Pringle, soup; Mrs. Warren, salad; Miss Doris Holmes, main course; Miss Phyllis Thorpe, beverages; the Misses Helen and Alice Fields, dessert.

The meeting brought in a close a very enjoyable year's work for this group.

Bentley

BENTLEY.—Mr. and Mrs. F. W. Thorpe and daughter Phyllis, Mrs. J. H. Dameron and Harry Wilkie motored to Edmonton on Saturday to attend the basketball game between the Grads and the Tulars.

Miss Norma York, R.N., of the Bentley community Hospital staff is spending her holidays at her home in Edmonton. Miss Kenner, R.N., of Bentley, is taking her place during her absence.

Miss Dorothy Pierson of Leedale district spent last week with her grandmother, Mrs. H. E. Reed, and Mr. Reed of Bentley.

Mrs. C. A. Trimble spent the weekend at her home, Mrs. M. A. Trimble, of the University Hospital, Edmonton.

Mr. and Mrs. Irvine Palmer, Joyce and Derald left for Vancouver on Saturday for a short visit with Mr. Palmer's father and sister. G. Afflick of Edmonton is in charge of the pool room and barber shop during Mr. Palmer's absence.

Miss Ruth Witte, who has been working in Ponoka for some time, is spending a month's holiday with her mother here.

Mr. and Mrs. J. W. Grant and family of Morningside spent the weekend with Mrs. Grant's parents, Mr. and Mrs. J. F. Miller.

Mr. and Mrs. Paul Pierson and family and J. Thompson of Leedale were Sunday visitors at the home of Mr. and Mrs. H. E. Reed.

Mr. and Mrs. Grant have been working in Rimbey for the past three months, returned to her home in Bentley last week.

Miss Shirley Wilkie is visiting at the home of her grandparents, Mr. and Mrs. Wilkie of Edmonton.

Miss Florence Stearns is working in Calgary.

New Arrivals
Born at Bentley Community Hospital: To Mr. and Mrs. H. A. Wilkie of Bentley, a son, Terrence Albert. On Sunday, June 6th, to Mr. and Mrs. C. Raab, of Bains Creek, a daughter.

Mr. and Mrs. Virgil Blackmore returned to their home near Winfield last Sunday after spending some three weeks here. Mrs. Blackmore was visiting at the home of her parents, Mr. and Mrs. C. Johnson, Bentley, while Virgil was assisting his father with spring work on his farm near Blackfalds.

Miss Edith Jaffray of Lockhart, who was assisting her cousin, Miss Helen Jaffray, at "Bertha's Confectionery and Tea Room," has returned to her home.

Mrs. R. Finch left on Saturday for a two weeks' holiday with friends in Spokane, Wash.

Mrs. J. B. McPherson was hostess to the Bentley Ladies' Aid of the United Church on Thursday, June 3rd. Lunch was served by the hostess.

Westling

WESTLING.—The Swedish Lutheran Church will hold its annual picnic on Saturday, June 19th, at the Westling picnic grounds. Dinner will be served at noon. A sale of fancy work, baseball and a full line of sports will take place.

Mr. and Mrs. Summerville attended the Liberal convention in Calgary last week.

Mr. and Mrs. Oscar Westling and Mrs. Edna Westling were Edmonton visitors for the week-end.

Be sure to attend the dance in the Westling Hall on Friday night, June 11th, with the Rocky Mountain Rangers playing.

Allison Skipworth and Robert Montgomery Featured at Avalon

Hollywood has learned to choose the best of stories and select the best material in them for its pictures.

This is definitely demonstrated in the screen adaptation of "Piccadilly Jim." The words of P. G. Wodehouse in the story made the reading world rock with laughter. The picture visualizes his comedy perfectly.

A stellar cast is worthy of the memorable story and the selection of its personnel was itself a stroke of genius.

Robert Montgomery, in the title role, performs his finest part, and Madge Evans, Frank Morgan and Billie Burke all have pleasing parts. On the other half of the Avalon's double bill, Allison Skipworth appears in a picture of the open road, "Hitch-Hike Lady," which has been widely acclaimed all over Canada.

BERRIES & CHERRIES

PRODUCER TO CONSUMER

WHY PAY THE EXTRA CHARGES?

Berries delivered to your door, charges prepaid within radius of railway express.

PRICES PER CRATE
Strawberries.....\$3.15 Black Currants.....\$3.50
Raspberries.....\$3.50 Gooseberries.....\$3.50
Loganberries.....\$3.50 Cherries—Sweet.....\$2.50
Red Currants.....\$3.50 Lamberts.....\$4.00

(Strawberries ready for shipment about June 25, all others about July 10 except for Bing and Lamberts which will be late July.)
Get your orders in NOW to insure prompt delivery
Send your remittance by express, P.O. or bank money order, to
Kamloops Produce Co., Ltd. KAMLOOPS, B.C.

Motor's Installment Plan.

C-107

WORLD HAPPENINGS BRIEFLY TOLD

A new flight into the stratosphere is being planned by Prof. Auguste Piccard and his associate, Max Cosens, it was learned at Brussels.

The British Air Ministry wants 1,300 boys between the ages of 15 and 17, with sound education, to enter the Royal Air Force as aircraft apprentices next August.

The British government, in consultation with the dominions, will be urged by the British Empire Service League to provide machinery for the enlistment of a quota of dominions men in the imperial forces.

The commonwealth's bureau of statistics estimated 97 per cent of Australia's population of 6,725,000 was of British descent. About 86 per cent was Australian-born, the bureau said.

Poland is seriously considering mass evacuation of Jews to Palestine, to French Madagascar off Africa, or to other safe havens to avoid future anti-semitic disturbances in the country.

McGill University announced the appointment of Dr. W. H. Brittain, vice-principal of Macdonald college, as its temporary principal pending appointment of a successor to A. E. Morgan.

Water poloists of Sydney, Australia, are seeking to have the game recognized as an official sport at the Empire Games there next year and if successful, Canada, South Africa and England may send teams.

The French army is the strongest and best equipped in Europe, Die Weltmacht, Reich war ministry organ, declared in a special edition devoted to a review of "the aggressive designs" of Germany.

Strange Customs

Oddities Of Life Among The Natives Of Papua

These oddities of life among the Aboriginal natives of Papua were galled from the annual report of Lieut.-Gov. Sir Hubert Murray to the commonwealth government.

The first native appointed a village constable in Kororua district arrested his own ward for murder.

On a tributary of the Purari river a patrol found a two-storey house, 75 feet long, built in living trees. Women occupied the lower floor and men the upper.

Women on the upper waters of the Barji river cut three-foot lengths of bamboo. These they will fill with cork, cork up one end, and put in flames. When the bamboo blazes along, they crack them they regard the food as cooked.

At the village of Marau, pigs have abnormal feet, apparently because they walk on soft sand. On each foot are long, horn-like growths five inches long and four at the tips like a Turkish slipper.

Control Of Weeds

Killing Plants By Use Of Poison Is Complicated

A new method of determining amount of poison needed to control weeds under field conditions was described before the Royal Society of Canada at Toronto.

Results obtained through its use indicate weeds may be controlled with far smaller doses of poison than is needed to kill them.

The method, described in a paper by Dr. W. H. Cook of the national research council, Ottawa, involves testing the weeds by growing them in laboratory solutions to which varying quantities of poison have been added.

Dr. Cook explained the task of killing plants through use of poison was complicated by the fact the poison usually could not be fed directly but was administered in the form of sprays. Part of the spray which acts normally through the leaves drains into the soil and is lost and this wastage increases as the volume of spray becomes larger.

He concluded this difficulty could be avoided if the approximate dose required were known in advance and concentration of spray solution adjusted.

Unusual Sports Event

Blind Students Hold International Track Meet In Brantford

One of the most unusual sports events to be staged in Canada this year was held in Brantford on the campus of the Ontario School for the Blind. Students of the New York State school for the blind, to the number of 20, engaged a like number of sightless students of the O.S.B. in an international track and field sports meet. The student scoring the highest number of points received the international trophy.

Faith In Young People

"The young people of the Anglican Church will respond to the highest spiritual leadership we will give them," said Archbishop Owen before the Toronto Synod, when he expressed "the utmost confidence" in the young people of the day. In reality, there is a lot of unnecessary shaking of heads over the boys and girls of this age, but one may search history and find the same thing in every past decade.

France imported \$42,694 worth of American fishing tackle last year.

Driftless Dangers

Hazard To Human Life In Hydrogen-Filled Zeppelin

Certainly to lead 100 human beings aloft in a hydrogen-filled Zeppelin seems analogous to putting a like number aboard a train to which a dynamite-laden car is attached—on a ship with a cargo of high explosive.

The train might go thousands of miles without the dynamite car exploding. The ship might be brought safely into port by a skillful skipper, just as the Hindenburg and the Graf Zeppelin have completed many transatlantic flights under the mastery of Germany's sky navigators. But the hazard to human life would be there, through every mile which train or ship might travel.

—Just as the hazard to human life was present through every mile which the Hindenburg flew before it met disaster. And the hazard was there, because a hydrogen-filled Zeppelin could make bigger profits than a helium-filled Zeppelin.

But even helium doesn't make a driftless safer—as the United States navy knows to its sorrow. Washington dispatches report revival of the old controversy between the heavier-than-air and lighter-than-air schools of aviation thought. We see no need for reviving an argument which the heavier-than-air advocates won long ago.

The American people are not particularly interested in this technical debate between two schools of flying thought. Settlement in this country is clearly against further sacrifice of American lives in new Zeppelins or new Akron's. —Buffalo Courier-Express.

Returning Prosperity

People Spending More Money As Evidenced By Bank Cheques

Millions of cheque stubs bear evidence of a new faith in Canadian prosperity. After tallying up the total spent by bank cheques in Canada in the first four months of 1937, the Dominion bureau of statistics announced it had reached \$12,525,000, compared with \$11,132,000 in the same months of last year.

"The gain of 12.5 per cent. is an excellent measure of the betterment over the early months of last year," said the report.

Sharpest increase was in the Maritime provinces where the total of \$254,317,000 was 35 per cent. higher than 1936 figures.

Quebec and Ontario were up nearly 21 per cent, each with totals of \$4,156,255,000 and \$5,867,089,000.

British Columbia showed a betterment of 8.1 per cent, at \$725,961,000. The prairie provinces lost 2.5 per cent, at \$3,028,709,000.

Following are the totals for the main western cities with figures for the first four months of 1936 in brackets: Winnipeg, \$935,465,000 (\$1,444,148,000); Calgary, \$221,107,070 (\$389,000,000); Vancouver, \$562,349,000 (\$553,804,000).

Bank clearings in April jumped to \$3,756,200,000 from \$3,189,836,000 in April, 1936, an increase of 22 per cent.

Old Practice Has Merit

Manitoba Professor Believes Bleeding Patients Is Often Beneficial

Nearly 160 doctors in Winnipeg for the Manitoba Medical Association's convention, heard Professor F. T. Cadham of the University of Manitoba uphold practice of bleeding patients as worthy of modern research.

Moderns who smile at tactics of doctors who used to bleed patients to rid them of certain ailments might be surprised to learn the practice has a great deal of merit, Prof. Cadham said.

He had experience in removing blood from young people who contracted infantile paralysis, he said, and by taking small quantities of blood from them their health was vastly improved.

Not An Elaborate Meal

Fairly Simple Menu For State Banquet After Coronation

The State Banquet at Buckingham Palace which followed the Coronation ceremony was a most magnificent affair. The guests ate from golden plates and the servants were resplendent in their new liveries.

The menu card decorated with the Royal Coat-of-Arms in gold, set forth the bill-of-fare with its main dishes as follows: (It is not so elaborate as one might have expected.) Turtle soup, fillet of sole, saddle of spring lamb, with green peas and new potatoes, roast spring chicken, mince pie, asparagus, ice cream, little cakes, cheese on toast and coffee.

Find Giant Tree

An Australian eucalyptus tree which scientists claim was originally 400 feet high has been discovered in a remote part of Tasmania. Discoverers of the tree said the upper portion has fallen off. Six feet per section has fallen off. Six feet above the base the tree has a diameter of 35 feet. Distance to the first limb is 170 feet.

Canada exported \$23,497,000 worth of copper bar, rods, etc., during the year 1935.

The Irish Free State has a scrap iron shortage.

Interesting Birds' Nests

Specimens Gathered From Many Countries Interesting To Nature Lovers

The sketches which accompany this article show birds' nests which are rather interesting, especially to nature lovers.

No. 1 is supposed to be a Tailor Bird's nest and came from Singapore, East Indies. It measures four feet long. There must be different species of the Tailor Birds. Some actually new leaves together. This special nest is made entirely out of grass and is worked around a main blade which is somewhat like the blade of a burrush.

No. 2 is a Baltimore Oriole's nest and is rather unusual for it has about ten different colors. There are strands of yarn, silk and cotton. These were hung in a tree and were used by the Oriole mother in building her interesting home.

No. 3 is a Weaver Bird's nest and came from Indore, Central India. It is made of a fine straw and is a masterpiece of weaving. The tube which hangs under the nest is about four inches long. The nest is about 18 inches long.

No. 4 is the tiny home of a Hummingbird. The nest is about two inches wide. It is made of plant down. These nests were collected by Dr. V. Rondeau, dentist of Rouleau, Sask.

Does Thorough Job

Vacuum Lawn Mower Cuts And Cleans Up Grass

Resembling a vacuum cleaner both in form and action, the latest lawn mower cuts the grass and then sucks the cuttings, leaves, twigs and other small rubbish into a container. Thus it does a thorough job of cleaning as it goes. Cutting is done by scythe-like rotary blades which are turned by direct drive from a gasoline engine. The cutting blades of the mower are adjustable and can be set to cut the grass to any height desired. The blades are hollow-ground, and it is their rapid revolving that creates the suction which draws the large container located at the back of the machine.—Popular Mechanics.

Aid For Travellers

Impossible To Miss Train If New Service Works

Misling the train is a minor tragedy that may never occur again if the service being tried experimentally at Sterling, Illinois, proves successful. Any Chicago & North Western patron who wishes to catch the 6:17 a.m. train may telephone the station agent the night before and be assured that he will be called just one hour before the train arrives, whether it is late or on time. If successful, the service may be extended to other cities.

China has just established a passenger and freight navigation service to Manila, the first Chinese shipping line to a foreign port in many years.

The noted plant wizard, Luther Burbank, won his first great triumph with the Burbank potato.

At Newmarket, England, valuable race-horses are to be equipped with gas masks. Won't it be odd when a horse wins by a nose instead of by a nose?

Sleeping Powder Insanity

Misuse Of Chemicals Results In Many Mental Cases

Sleeping powder insanity, a new mental hobgoblin among the "psychosees" that are relentlessly increasing in the United States, was reported to the American Psychiatric Association at Pittsburgh.

It is one of the strange reactions of human beings to misuse of the food of new chemicals coming from the scientific, synthetic laboratories. There is no doubt, said Frank J. Curran, M.D., of Bellevue Hospital, New York, of a definite increase in mental illness from over-indulgence in one of these more recent drugs, known as the barbiturates.

Sixty different barbiturates are manufactured. Hundreds more can be made easily by test tube combinations. They are, he said, the most frequently used ingredients in hypnotic and sedative drugs. They are given by physicians for many forms of illness.

But, said Dr. Curran, when taken unrestrictedly by laymen, they may induce insanity. The results include stupor, convulsions, halting speech, trembling, usually applied while the fingers and unsteady gait. He described 114 of these barbiturate sleeping powder insane admitted to Bellevue.

Second to the barbiturates in causing the new type of insanity stands an older drug, bromide. The victims of misuse of this sedative, fever voices, imagine they feel electric shocks. Instances of 63 bromide cases were given; 21 of these minds went wrong from a combination of both barbiturates and bromides.

Gardening

There are two groups of garden insects—those that eat holes in the foliage and those that suck out the juices. For the first-named, the remedy is usually applied while the suckers are attacked with a burning spray which penetrates. Often when both are present a combination of poison and something that burns, such as lime sulphur and arsenate, give the best results.

The best remedy for sucking insects is usually quite apparent but the presence of aphids or scale is only shown at first by a wilting or withering of the foliage. For sucking pests, chief of which are the aphids or plant lice, spray with whale oil soap, a quarter pound of soap to a gallon and a half pint of water; nicotine sulphate or "Black Leaf 40" or any other repellent secured from a reliable source.

When fungus attacks the plants, the foliage usually turns yellow or brown, and white spots like "sulfur" cover the leaves. Fungus is most common in warm, murky weather. Spraying with Bordeaux Mixture or dusting with specially finely ground sulphur is advised. Sulphur dust will give the best results.

Tender vegetables are those which have been grown quickly. Especially with such things as radish, carrots and beets is slow growth disastrous as the roots become woody and filled with objectionable fibre. But this rule also applies to everything used for salads. On this account experts advise growing with frequent cultivation and applications of a good chemical fertilizer. This should be carried out according to proper directions.

Sacrificing The Forest

Ten Acres In Stanley Park, Vancouver, Being Cleared

To thousands of Vancouver people the sound of axe and saw, now busy in Stanley Park, will bring pangs of regret. It is always a sad thing to see a great forest tree sacrificed, but when it is an old friend that goes down, the sadness is accentuated. And old friends are falling to-day in Stanley Park.

There is no help for it, of course. Progress demands that a bridge shall be built across the Lions Gate to the North Shore and there is no other site for the southern bridgehead save in Stanley Park. This means the cutting and building of a new road a mile or more long and that means the sacrifice of ten acres of forest.—Vancouver Province.

SHAKE THIS MODEL AT HOME—WEAR IT FOR EVERY OCCASION

By Anne Adams

Wear this charming Anne Adams frock for that special occasion where you want to be an instant "hit." Its graceful, flowing lines will give you a carefree feeling of poise and self-confidence. The rippling yoke-sleeves add a dash of gay indifference to this frock, and you'll adore its low V-neckline with the soft roll collar. Notice the skirt with that delightful swirl of frivolity, the saucy button trim, and the perky, novelty belt. It's so simple to make you'll be amazed at the quick results. The sleeves and yoke are cut in one piece to make it still easier for you. For fabrics, use a colorful batiste, voile or sheer.

Pattern 4426 is available in misses and women's sizes 14, 16, 18, 20, 22, 24, 26, 28, 30 and 32. Size 16 takes 3 1/2 yards 39 inch fabric. Illustrated step-by-step sewing instructions included.

I HAVE STILL A FEW BUSHELS of Certified Legacy Oats for sale. Apply A. Gilmore, Lacombe. J10p

RHUBARB SAUCE The easiest way to prepare rhubarb is in sauce. One method consists of first making a thick syrup of sugar, cutting the rhubarb into pieces about half an inch long, dropping the pieces into the syrup and cooking until tender. This takes only a few minutes. Another good method is mixing two parts of the fruits to one part of sugar and cooking them until the liquid oozes out and forms a syrup.

NOTICE IN THE MATTER OF the Estate of SUSAN ELIZABETH POLING, late of the Village of Bentley, in the Province of Alberta, Widow, Deceased.

NOTICE IS HEREBY GIVEN that all persons having claims upon the Estate of the above named Susan Elizabeth Poling, who died on or about the seventeenth day of April A.D. 1937 are required to file with the undersigned as Solicitor for the Executor of the Estate of the deceased by the 23rd day of June A.D. 1937 a full statement duly verified of their claims and of any securities held by them and that after that date the assets of the deceased will be distributed among the parties entitled thereto, having regard only to the claims of which notice has been filed or which have been brought to the knowledge of their Solicitors.

DATED this 7th day of June, A.D. 1937. EDWIN H. JONES, K.C., Lacombe, Alberta, Solicitor for the Executor. J10c Advt.

24 to 30 months—1st and Champion, William Magilton, Lacombe, "Supreme Lad 1st"; 2nd, Henderson Bros., Lacombe, "Gallant Prince"; 3rd, John Laing, Blackfalds, "Greenbrae Calrose Boy".

Under 18 months—1st, Dept. of Agriculture, Olds, "Lord Ramsden"; 2nd, Dept. of Agriculture, "Golden Duke"; 3rd, A. W. Latimer, Bowden, "Grand Sultan".

Over 30 months—1st, Chas Stuart Garbars, "Royal Doune"; 2nd, F. A. Sissons, Clive, "Village Mayor 11th".

Yes, he had ridden before! ... and it seemed hard to realize that this was the same Carroll Schilling, so far from the vast crowds which had cheered him to victory so often.

Rimbeys Mrs. W. S. Mellis of Rimbeys attended the funeral of her sister-in-law, the late Mrs. Robert Mellis of Edmonton, who died May 31st in an Edmonton hospital. The deceased was well known in the Rimbeys district, where she resided some years ago.

F. W. Vipond, of the district south of Rimbeys, was recently bereaved when his mother, Mrs. L. M. Vipond of Trail, B.C., died on May 25th.

Enjoy Picnic and Hike The senior group of the C.G.I.T. under the able leadership of Mrs. Vipond have been very active during the past month and have fulfilled their pledges faithfully in all phases of C.G.I.T. work. Mrs. Vipond, who with Rev. W. D. Rice will leave shortly for their new appointment at Castor, has been an exceptionally capable leader and the girls regret their departure from Rimbeys.

Col. Wm. Prescott commanded the American forces at Bunker Hill.

Fact and Fiction ...

By ART

EVERY once in a while we meet by chance someone whose name has once been headline material for every paper in the land, and whose quick rise to fame and fortune has only been exceeded by the speed of their drop into obscurity. Read on.

'Twas in Calgary one morning in 1926 and I was taking breakfast in the Palace Cafe. Got into conversation with a fellow diner, who remarked that he had just arrived at the depot with an express car of race horses from Omaha. He was training horses now, but had high hopes of riding again.

"Again?" I asked. "Did you ever ride before?" (He was a small fellow of the rough-and-ready type, whose appearance and clothes showed little acquaintance with prosperity).

Yes, he said, he had ridden horses before, on the large American tracks in New York and Kentucky, and was trying to reduce his weight in an endeavor to hit the "comeback trail."

That night I scanned the racing volumes to see what success had come to this Carroll Schilling, my acquaintance. Said the books: Between 1907 and 1912 (when "increasing weight had gently eased him from the saddle"), he had ridden winners in the Alabama Stakes, the Toronto Breeders' Stakes, Canadian Derby, Futurity Stakes (\$27,000 to the winning owner) and scores of other stake races.

During the year 1912, which was a year of purse money, he won \$2000 to \$20,000 each. Then one afternoon in Kentucky they hoisted Carroll aboard the good horse Worth and down the stretch he came, a-kickin' and a-pravin', to win the Kentucky Derby.

Yes, he had ridden before! ... and it seemed hard to realize that this was the same Carroll Schilling, so far from the vast crowds which had cheered him to victory so often.

The World of Wheat

By H. G. L. STRANGE, Director, "Crop Testing Plan"

The eyes of the wheat world at this moment are fixed anxiously on the crops now growing in the United States and Canada. The yield of the Canadian crop will depend mainly upon the rain that falls last-fall, and that, in addition, which will fall during the present growing season.

If this total precipitation should be up to the average, size (with certain allowances, of course, for damage from hail, insects, plant diseases, etc.).

What is the rainfall situation at this moment? Records from hundreds of rain gauges indicate that for Manitoba the total average precipitation, fall and growing season combined, now is 93 per cent of normal, for Saskatchewan 66 per cent of normal, and for Alberta 84 per cent of normal.

All this means that better than average rains will soon be expected to occur if an average crop is to be harvested. There is, however, still time for good rainfall to take place to overcome the deficiency, for the wheat plant does not begin to call for abundant moisture until after the middle of June. From that time forth, however, until harvest, its demands can only be described as prodigious.

The following factors have tended to raise prices—Germany again purchasing Australian wheat, official Indian wheat estimate reduced by 25 million bushels; possibility of war again looms in Europe; average of U.S. private winter wheat estimates 649 million bushels, compared with 652 million a month ago; Canadian shippers buying back Dutch barley sales.

The following factors have tended to lower prices—indicated increase of 10 per cent in Northern Hemisphere wheat acreage, excluding Russia and China; France exports wheat to Germany and Spain; more favorable European weather and crop advices; good rain in some parts of North America; world shipments of summer oranges plentiful; large lemon crop in Sicily.

The following factors have tended to lower prices—indicated increase of 10 per cent in Northern Hemisphere wheat acreage, excluding Russia and China; France exports wheat to Germany and Spain; more favorable European weather and crop advices; good rain in some parts of North America; world shipments of summer oranges plentiful; large lemon crop in Sicily.

The following factors have tended to lower prices—indicated increase of 10 per cent in Northern Hemisphere wheat acreage, excluding Russia and China; France exports wheat to Germany and Spain; more favorable European weather and crop advices; good rain in some parts of North America; world shipments of summer oranges plentiful; large lemon crop in Sicily.

Pair On Skates Roll Across United States

By H. G. L. STRANGE, Director, "Crop Testing Plan"

NEW YORK—Five full-course meals a day, plus little knick-knacks such as ice cream, fruits and vegetables, kept Norman Skelly of Pawtucket, R.I., from becoming hungry while he roller skated from Boston to Los Angeles, the skating rink proprietor said recently as he rested here after his trip from the Pacific Coast.

Mr. Skelly told reporters that with John Shefaga he skated the 4075 miles en route for rest periods. Three Nights On Desert

Notes taken by the pair showed they skated out of Boston at noon on October 2nd and arrived in Los Angeles on December 4th. Bad connections and the distance between western towns made them pass three nights on the desert.

While the same skates were used throughout, the two men replaced 180 steel wheels and 960 cones, besides eight rubber cushions. For braking power on downhill stretches they slipped the tip of a cane in front of the left rear wheel, bearing against it with the knees.

The daily average was 7 1/2 miles an hour for 10 hours of skating and walking. Smooth, level, roads gave the skaters a speed of 18 or 20 miles an hour, and at one point they estimated their downhill rate was 40 miles an hour.

sphere wheel acreage, excluding Russia and China; France exports wheat to Germany and Spain; more favorable European weather and crop advices; good rain in some parts of North America; world shipments of summer oranges plentiful; large lemon crop in Sicily.
